

## What Is Poker Rakeback

Thursday, 19 June 2008

Last Updated Sunday, 08 February 2009

Why play poker with Rakeback? The biggest reason why you should be playing with Poker Rakeback is that you will be getting a percentage of the rake that you pay to the poker rooms back to your account every month. So instead of the poker room keeping all of the rake you generate, they pay you back for example 50% of your rake during the month which is the case if you are playing with FAT BET POKER for example. All you need to do in order to get rakeback at FAT BET POKER is to use the signup code [HERE](#) when you create your account. After you have done that you will automatically get 50% of the rake you pay every month back to your poker account. So if you are generating \$1000 in rake during a month for example you will be getting \$500 back to your account at the start of the next month. If you are playing without rakeback you will get \$0 back and the poker room will keep all of the rake that you generate.

Once you have created an account at a poker room you can not create a second account so make sure that you create an account that will give you rakeback from the beginning.

Most of the poker rooms that offer rakeback will also let you clear the initial Poker Bonus at the same time as you are earning rakeback.
